All the Earth Hour References

The different positions of the earth contact identifies the entry position of the plug and socket system, for specific applications, in accordance with the I.E.C. 309 standard. The standard also calls for different colour code of the bodies for ease of identification.

The hour references identity:-

- Polarity of circuits
- Various voltages and frequencies
- Special applications e.g. refrigerated containers

The new range includes all the time references included in the standard EN60309-2. This standard covers all the possible applications used in the industrial and commercial sector.
