

## QUIXX IP66 Cable Glands

### ***Why waste time with standard, non-stress relief cable glands?***

Cable Glands would be all very fine, if only they didn't take so long to put together. By the time you've found the right size, unscrewed it, fixed the locknut and adjusted the sealing gasket....it can take minutes to install a cable with a non-stress relief cable gland.

### ***Save time and money with one product - the Quixx.***

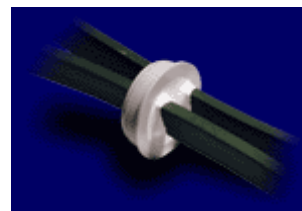

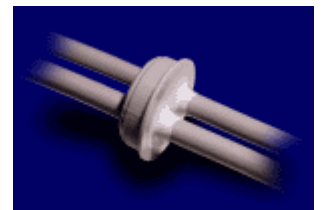

Quixx is made by a two-component injection moulding method - hard and resistant on the outside, with an easy-to-pierce thermoplastic elastomer on the inside. And of course, the tiresome task of adjusting the sealing gasket is a thing of the past.

### ***Push-in, pierce through – ready to go!***

Quixx seals well against dust and damp (IP66), indeed several times over if necessary. Depending on diameter, quixx lets you pass a number of cables through the one cable entry.

IP66 protection still maintained, even using several cables....

....or even using flat cables.

Code	Size (mm)	Box Qty
<b>EMT-16</b>	16	100
<b>EMT-20</b>	20	100
<b>EMT-25</b>	25	100
<b>EMT-32</b>	32	50
